

# INTRODUCTION TO MACHINE LEARNING ON GCP

- Google Cloud Platform (GCP) offers many services for Machine Learning
- Full support for Python, Tensorflow and others
- Services include AutoML, AI platform, VertexAI, Document labelling, Video intelligence, Speech-to-Text, Vision AI, Cloud Translation, Cloud Natural Language, Recommendations and Retail.
- Pre trained models and custom models are deployable
- Google's neural-net service has better accuracy and training performance than any other large-scale deep learning system on the market to use

# Services offered in AI on GCP
